**ONLINE TEST ENGINE**  
Online  
Best Practice Material

- ✓ Online Tool, Convenient, easy to study.
- ✓ Instant Online Access
- ✓ Supports All Web Browsers
- ✓ Practice Online Anytime
- ✓ Test History and Performance Review
- ✓ Supports Windows / Mac / Android / iOS, etc.

**DESKTOP TEST ENGINE**  
Soft  
Best Practice Material

- ✓ Installable Software Application
- ✓ Simulates Real Exam Environment
- ✓ Builds Exam Confidence
- ✓ Supports MS Operating System
- ✓ Two Modes For Practice
- ✓ Practice Offline Anytime

**PRACTICE PDF**  
PDF  
Best Practice Material

- ✓ Printable PDF Format
- ✓ Prepared by IT Experts
- ✓ Instant Access to Download
- ✓ Study Anywhere, Anytime
- ✓ 365 Days Free Updates
- ✓ Free PDF Demo Available

 **Security & Privacy**  
ActualVCE respect customer privacy. We use McAfee's security service to provide you with utmost security for your personal information & peace of mind.

 **Instant Download**  
After Payment, our system will send you the products you purchase in mailbox in a minute after payment. If not received within 2 hours, please contact ActualVCE.

 **365 Days Free Updates**  
Free update is available within 365 days after your purchase. After 365 days, you will get 50% discounts for updating.

 **Try Before Buy**  
ActualVCE offers free demo of each product. You can check out the interface, question quality and usability of our practice exams before you decide to buy.

Believable Exam Dumps Questions grant you ensured success by your first attempt - ActualVCE

**Exam :** 070-580

**Title :** TS: Windows Mobile 6.5, Application Development

**Vendors :** Microsoft

**Version :** DEMO

NO.1 You are developing a Windows Mobile 6.5 application.

You have a DataSet object in memory.

You need to save the DataSet object to the file system as an XML file. You need to accomplish this by

using the fewest lines of code.

Which method should you use?

- A. System.IO.StreamWriter.Write()
- B. System.Xml.XmlDocument.Save()
- C. System.Data.DataSet.WriteXml()
- D. System.Data.DataTable.WriteXml()

Answer: C

NO.2 You are developing a Windows Mobile 6.5 application that references data stored in a Microsoft SQL

Server Compact 3.5 database named customers.sdf.

You need to ensure that the application creates the database if it does not already exist.

Which code should you include?

- A. If Not File.Exists("customer.sdf") Then  
File.Create("customer.sdf")  
End If
- B. Dim fileInfo As FileInfo = New FileInfo ("customer.sdf")  
if fileInfo.Length = 0 Then  
File.Create("customer.sdf")  
End If
- C. If Not File.Exists("customer.sdf") Then  
Dim sqlCeEngine As SqlCeEngine = \_  
New SqlCeEngine("Data Source='customer.sdf'")  
sqlCeEngine.CreateDatabase()  
End If
- D. Dim fileInfo As FileInfo = New FileInfo("customer.sdf")  
if fileInfo.Length = 0 Then  
Dim sqlCeEngine As SqlCeEngine = \_  
New SqlCeEngine("Data Source='customer.sdf'")  
sqlCeEngine.CreateDatabase()  
End If

Answer: C

NO.3 You are developing a Windows Mobile 6.5 application.

You need to programmatically write a file named customerlist.txt to the root of the file system.

Which path should you use?

- A. /customerlist.txt
- B. \customerlist.txt
- C. file://customerlist.txt
- D. \device\root\customerlist.txt

Answer: B

NO.4 You are developing a Windows Mobile 6.5 application.

You use Microsoft ADO.NET Synchronization Services to synchronize data with a server.

You need to synchronize pending changes from the server to the client.

Which Microsoft.Synchronization method should you call?

- A. Data.SqlServerCe.SqlCeClientSyncProvider.GetChanges()
- B. Data.SqlServerCe.SqlCeClientSyncProvider.AcceptChanges()
- C. Data.SqlServerCe.SqlCeClientSyncProvider.GetTableReceivedAnchor()
- D. SyncAgent.Synchronize()

Answer: D

NO.5 You are developing a Windows Mobile 6.5 application that stores data in a Microsoft SQL Server

Compact 3.5 database.

You write the following code segment to select data from a table.

```
string query = "SELECT * FROM ORDERS";  
SqlCeConnection conn = new SqlCeConnection(connectionString);  
SqlCeCommand command = new SqlCeCommand(query, conn);  
conn.Open();
```

You need to iterate through the records in the result set.

Which code segment should you use?

- A. 

```
SqlCeCommand cmd = command.ExecuteNonQuery();  
while (cmd.Read())  
{ // do work }
```
- B. 

```
SqlCeDataAdapter adp = new SqlCeDataAdapter(command);  
while (adp.Iterate())  
{ // do work }
```
- C. 

```
SqlCeDataReader rdr = command.ExecuteReader();  
while (rdr.Read())  
{ // do work }
```
- D. 

```
SqlCeResultSet rst = command.ExecuteNonQuery();
```

```
while (rst.Results())  
{ // do work }
```

Answer: C

NO.6 You are developing a Windows Mobile 6.5 application.

You need to programmatically write a file named customerlist.txt to the root of the file system.

Which path should you use?

- A. //customerlist.txt
- B. \customerlist.txt
- C. file://customerlist.txt
- D. \device\root\customerlist.txt

Answer: B

NO.7 You are developing a Windows Mobile 6.5 application.

You need to dynamically create a Microsoft SQL Server Compact 3.5 database by using merge replication.

Which System.Data.SqlServerCe.SqlCeReplication method should you call before you synchronize?

- A. BeginSynchronize()
- B. ReinitializeSubscription()
- C. AddSubscription(AddOption.CreateDatabase)
- D. AddSubscription(AddOption.ExistingDatabase)

Answer: C

NO.8 You have a Windows Mobile 6.5 application that stores data in a Microsoft SQL Server Compact 3.5 database.

You need to write code that automatically determines whether the database is corrupted and repairs the database if it is corrupted.

You are using the System.Data.SqlServerCe namespace.

Which two members should you use? (Each correct answer presents part of the solution. Choose two.)

- A. SqlCeEngine.Repair()
- B. SqlCeEngine.RepairOption
- C. SqlCeReplication.Validate()
- D. SqlCeEngine.Verify()

Answer: AD

NO.9 You are developing a Windows Mobile 6.5 application that stores data in a Microsoft SQL Server

Compact 3.5 database.

You write the following code segment to select data from a table.

```
Dim query As String = "SELECT * FROM ORDERS"
```

```
Dim conn As SqlConnection = _
```

```
New SqlConnection(connectionString)
```

```
Dim command As SqlCommand = New SqlCommand(query, conn)
```

```
conn.Open()
```

You need to iterate through the records in the result set.

Which code segment should you use?

A. Dim cmd As SqlCommand = command.ExecuteReaderSet()

```
Do While cmd.Read()
```

```
'do work
```

```
Loop
```

B. Dim adp As SqlDataAdapter = New SqlDataAdapter(cmd)

```
Do While adp.Iterate()
```

```
'do work
```

```
Loop
```

C. Dim rdr As SqlDataReader = command.ExecuteReader()

```
Do While rdr.Read()
```

```
'do work
```

```
Loop
```

D. Dim rst As SqlCeResultSet = command.ExecuteReaderSet()

```
Do While rst.Results()
```

```
'do work
```

```
Loop
```

Answer: C

NO.10 You are developing a Windows Mobile 6.5 application that references data stored in a Microsoft SQL

Server Compact 3.5 database named customers.sdf.

You need to ensure that the application creates the database if it does not already exist.

Which code should you include?

A. if (!File.Exists("customer.sdf")) {

```
File.Create("customer.sdf");
```

```
}  
B. var fileInfo = new FileInfo("customer.sdf");  
if(fileInfo.Length == 0) {  
File.Create("customer.sdf");  
}  
C. if(!File.Exists("customer.sdf")) {  
var sqlCeEngine = new SqlCeEngine("Data Source='customer.sdf'");  
sqlCeEngine.CreateDatabase();  
}  
D. var fileInfo = new FileInfo("customer.sdf");  
if (fileInfo.Length == 0) {  
var sqlCeEngine = new SqlCeEngine("Data Source='customer.sdf'");  
sqlCeEngine.CreateDatabase();  
}
```

Answer: C
